06 2074	M 22 x 1,5	12,0	31,0	14,0	27,0	22,0
06 2075	M 22 x 1,5	16,0	41,0	14,0	27,0	30,0
06 2076	M 22 x 1,5	18,0	34,5	14,0	27,0	32,0

Functioning method

With the straight screwed connections, this is a screwed connection with compression ring, where the Separ-Filters of the company Loesing Filterproduktion GmbH are adapted to pipe systems.

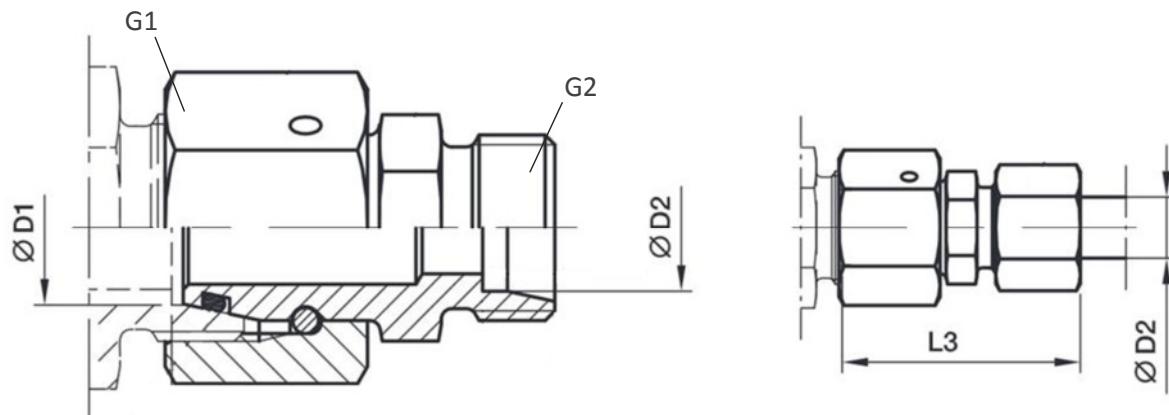

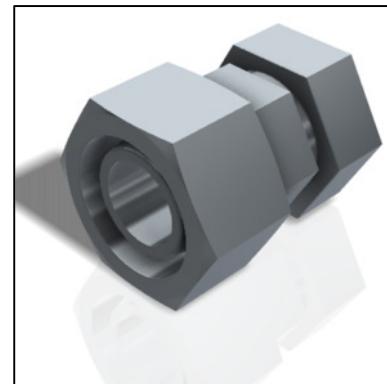

1. Screw the connection into the Separ-Filter. A preassembled O-ring takes over the sealing.
2. Slide the pipe with the matching outer diameter into the screwed connection as far as the stop.
3. Tighten the union nut. Lock the fitting with a corresponding spanner against rotation.
4. While tightening the union nut, the edges of the cutting ring are pressed into the pipe as a result of their geometry.

This has the effect that the compression ring makes a form-fitting sealed connection with the pipe. As an alternative to fixed piping, hose connectors can also be connected with the screwed connection.

Conical reducing connection

Werkstoff: Zinc-coated steel
Mech. connection: Variable

Variants

Art.-Nr.	D1 [mm]	G1	D2 [mm]	G2	L1 [mm]
06 1089	22	M 30 x 2	15	M 20 x 2	49
06 2060	12	M 18 x 1,5	8	M 10 x 1,5	40
06 2061	12	M 18 x 1,5	10	M 10 x 1,5	41
06 2062	15	M 22 x 1,5	10	M 12 x 2	44

Active water sensor

Measurement principle: *Capacitive*

IP Protection Type: IP 68

Casing material: See variants

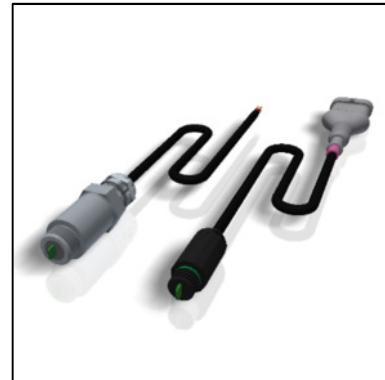

Mech. connection: See variants

Ambient temperature: -40 °C to +85 °C

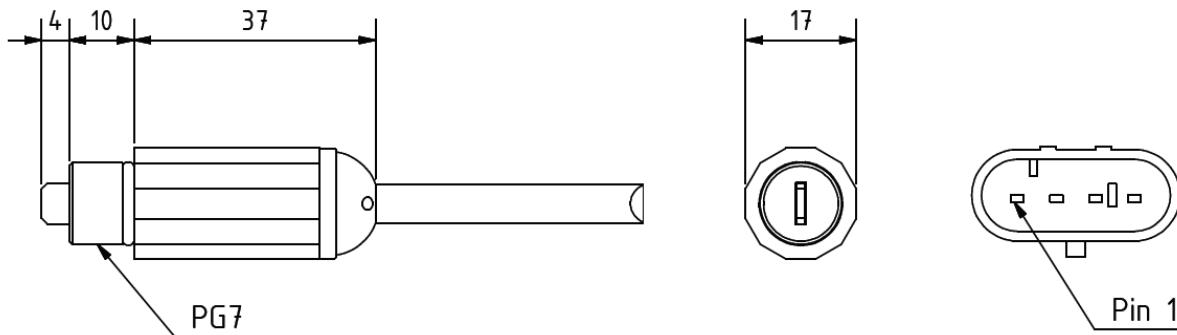

Medium: Diesel, bio-diesel

Elec. connection: 12 to 24 VDC

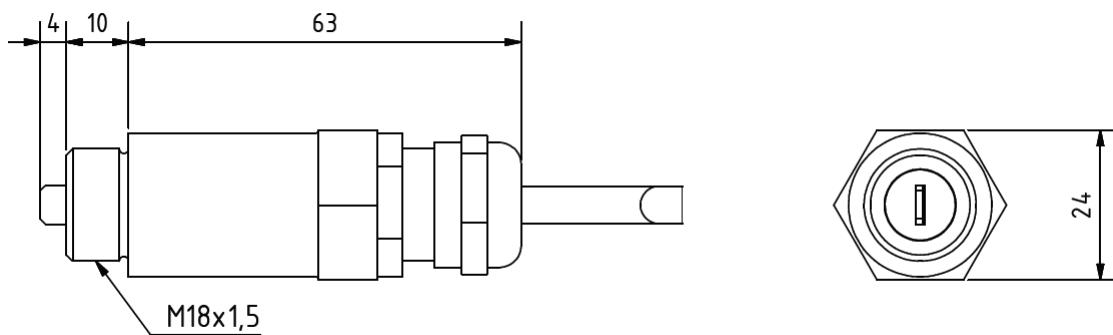

Cable: Flexible round cable

Plastic version

Metal version

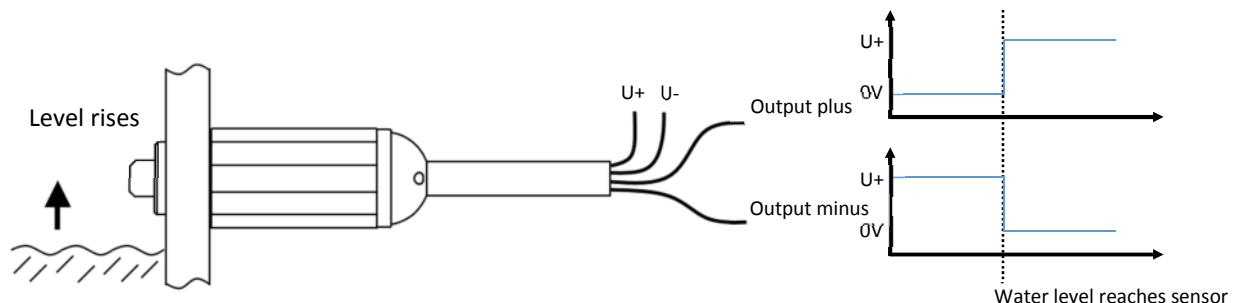

SEPAR
FILTER

Variants

Art. No.	Casing material	Overall length [mm] including cables	Mech. connection	Connection	U+	U-	Output plus	Output minus
06 1381	PBT	520	PG7	AMP plug ¹	Pin 2	Pin 1	Pin 4	Pin 3
06 3418	PBT	320	PG7	AMP plug ¹	Pin 1	Pin 2	Pin 4	Pin 3
06 1273	Aluminium	2000	M 18 x 1,5	Open cable ends	Blue	Black	Brown	White

Functioning method

The active water sensor can differentiate between the media water and diesel. It is based on a capacitive measurement principle. As a result of the measurement tip of the sensor not having any electrical contact with the medium, problems such as corrosion of the measurement tip and the non-identification of water which is low in minerals are avoided.

By means of a suitable interconnection, the output lines can be evaluated using on-board electronics, as well as visualized using LED's.

¹ Manufacturer: TE-Connectivity / AMP (Art. No.: 282106-1)

Hand priming pump

Casing material: PA / PP / ABS

Mech. connection: M 22 x 1,5

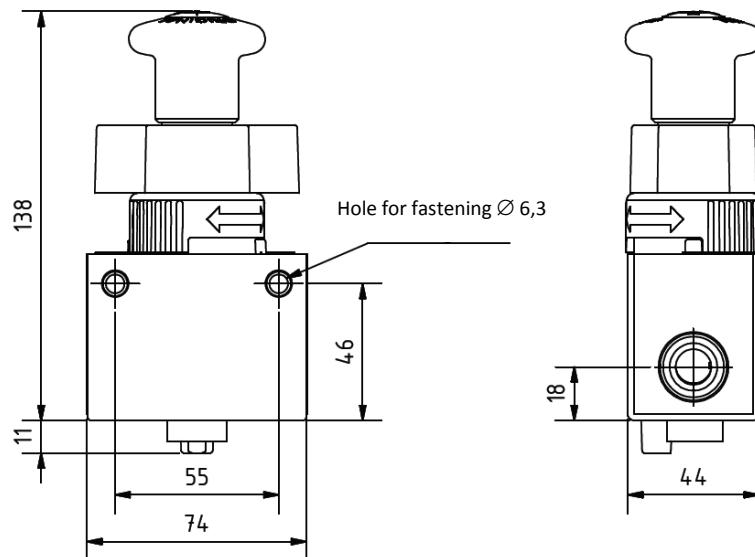

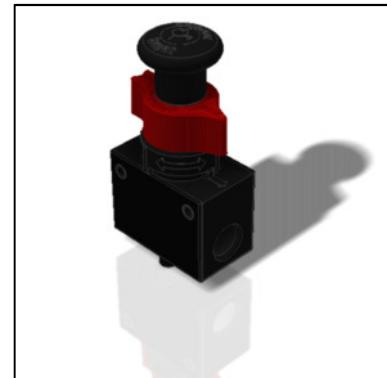

ISO 6149-1 form W

Ambient temperature: -20 °C to +80 °C

Pump volume per stroke: 25 ml

Medium: Diesel, bio-diesel

Compatible accessories: Straight screwed connection

Variants

Art. No.	Variant
06 1666	Standard implementation
06 3523	Implementation with metal clamp (zinc-coated steel) around housing

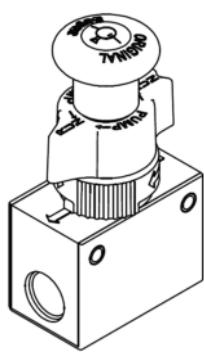

Functioning method

The hand feed pump is used mainly for the priming of the fuel filter / system.

The handling of the pump is as simple as possible. In normal operation (Illustration 1) the pumping station is not located in the volume flow and does not generate any pressure drop behind the pump. For the changeover (Illustration 2) into the pumping mode, the large knob designed as an arrow is rotated by 90°. Following this the pumping (Illustration 3) can be begun with directly.

Matching screwed connection

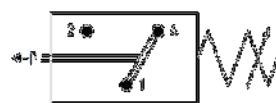

Art. No.	Pipe / Hose connection
06 2073	AL 10 LM M 22 x 1,5
06 2074	AL 12 LM M 22 x 1,5

Pressure-activated switch

IP Protection Type:	IP 65, clamp IP 00 DIN 40 050
Casing material:	Brass
Mech. connection:	G 1/8" external thread
Membrane material:	Viton
Switching hysteresis:	15 % to 25 %
Max. switching frequency:	< 100 Hz
Installation position:	Any
Burst pressure:	2 bar
Ambient temperature:	-25 °C to +85 °C
Weight:	approx. 120 g
Medium:	Diesel, bio-diesel
Elec. connection:	Changeover contact; flat-pin plug dimensions: 3 x 6,3 x 0,8 cm
Switching capacity:	30 VDC: Resistance load: 5 A

Circuit diagram

Change-over contact

Variants

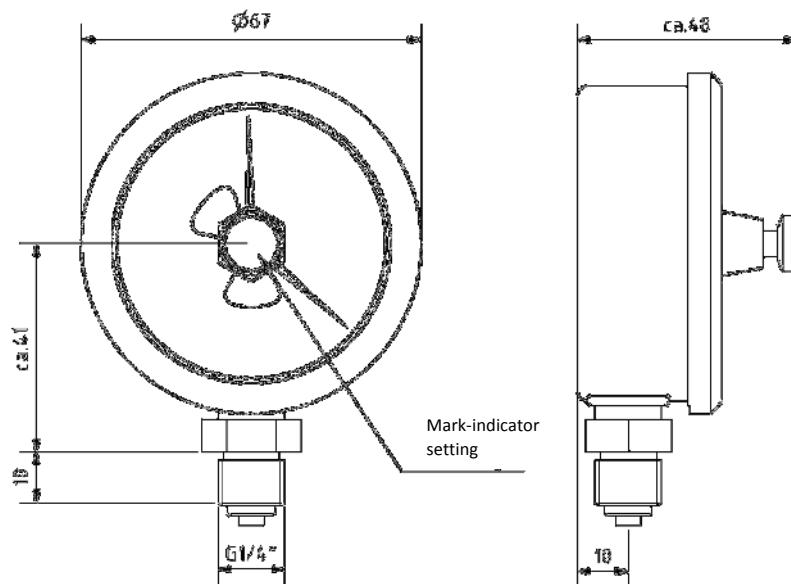

Art. No.	Preset switching threshold [pressure decrease in mbar]
06 1081	250
06 1082	350
06 1901	400

Functioning method

Relative pressure switch; measures the pressure decrease between the environment and the hydraulic connection. The ambient pressure must always be higher than the pressure to be measured. In case of inductive contact load, measures are to be taken for the elimination of arcing.

Vacuum meter

Article number:	06 3650
Casing material:	Stainless steel
Mech. connection:	G 1/4"
Accuracy class:	1.6
Display range:	-600 mbar to +600 mbar

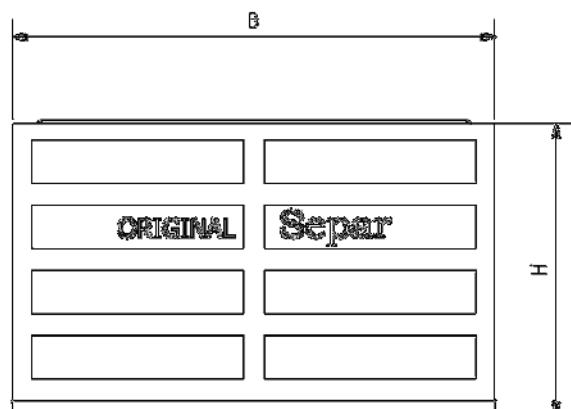

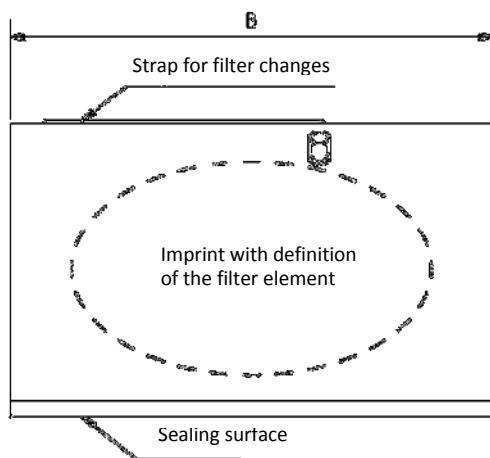

Functioning method

Absolute-pressure measuring unit with zero point at 1 bar absolute. It measures the pressure decrease in hydraulic systems. Variations in the air pressure and in the tank filling level directly affect the indicated pressure and are to be considered in the evaluation. The installation is implemented in the outlet side of fuel filters.

Filter elements

Separation capacity:	> 95 %
Filter gauge:	See variants
Ambient temperature:	-20 °C to +65 °C
Medium:	Diesel, bio-diesel
Perm. differential pressure:	250 mbar (paper) 700 mbar (steel)
